

World Population Cube

The World Population Cube is a polyhedral map display of an equal-population projection (*gridded population cartogram*). The three-dimensional shape of this hexahedron is a cube with six square faces. It can be brought into shape as follows:

- (1) Cut out the template
- (2) Prefold into six equally-sized squares
- (3) Apply glue to the 7 white flaps and carefully assemble to a box-shape cube

Ready is your World Population Cube!
